

Winter 2015

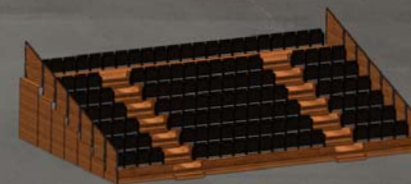

MUSEO DELLE CULTURE (MUDEC)

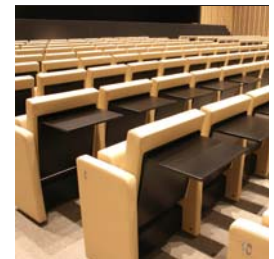

The MUDEC project came to reality as a result of an operation of archaeological recovery in the former industrial area of Ansaldo to give it over to the cultural activities. The disused factories, which are true monuments of industrial archaeology, have been transformed into workshops, studios and new creative spaces.

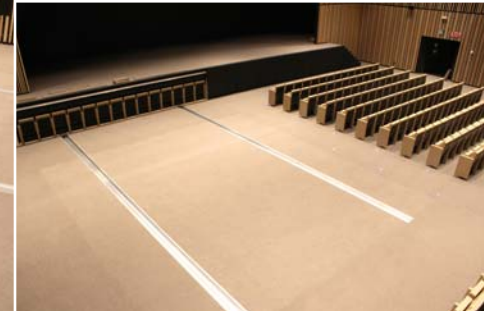

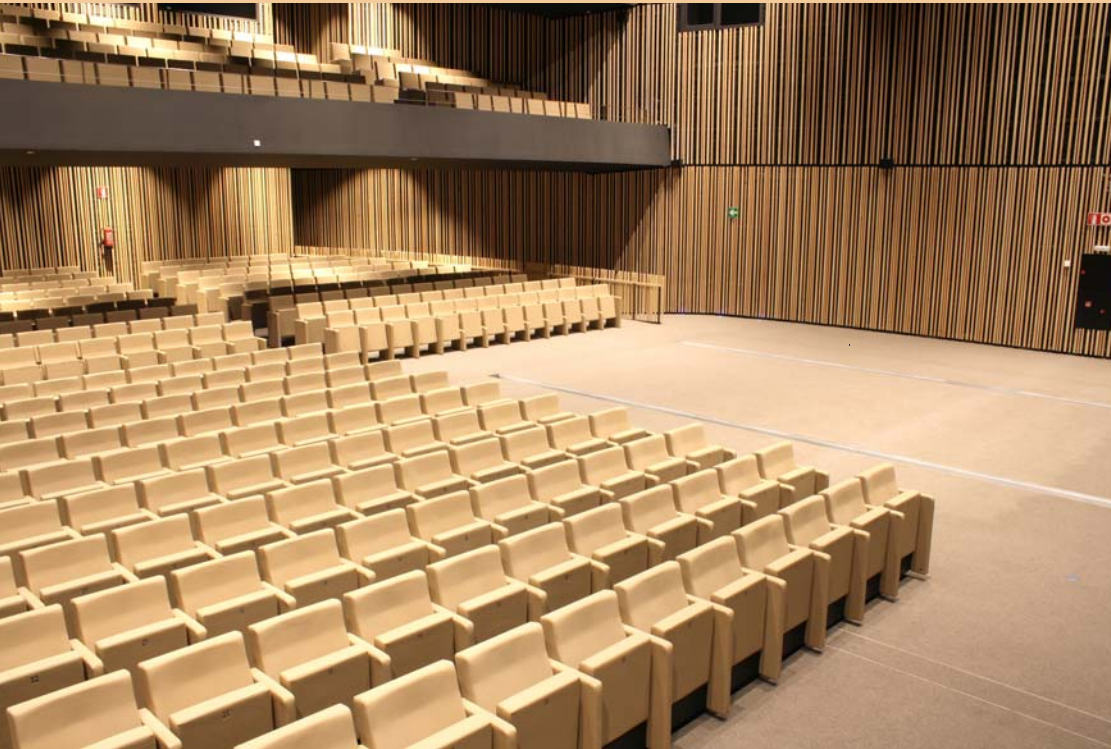

One of these venues is a multi purpose hall equipped with an impressive telescopic tribune with supplied by our company. Both the full grain Italian black leather used for the upholstery of the chairs and the American walnut that covers all the visible parts of the bleacher match the fine materials used in other parts of the building.

The renovation project of the Palacio Europa Congress Centre rapidly became a building reference in Spain due to its extraordinary efficiency properties - over 70% of energy saved when compared with previous consumptions thanks to its superb "garden facade". These works have totally transformed the existing spaces to get an overall capacity of more than 2,000 people: two multipurpose halls where the 800 seat auditorium stands out.

Check the custom design chair created by ASCÉNDER for this venue: chairs are mounted on an aluminium beam that moves along the rails previously installed into the floor. So, the venue can be totally emptied in minutes while concealing the chairs under the stage. Additionally, all chairs have a large foldable writing desk concealed in the back - so the venue gets the possibility of being used also as a conference venue.

The Anton Bruckner University is one of the 5 Austrian universities for Music, Drama and Dance.

The high acoustic absorption parameters required were a challenge for ASCÉNDER - several samples and prototypes were sent to the laboratory for testing until we got what this venue deserved. The result is a very elegant chair with oak outer panels, solid wooden inner frames, open cell foam and the finest wool from Kvadrat.
